Maintaining Conveyor Belt

Troubleshooting

Inspect conveyor belt for:

- Surface cuts or wear

- Damage to V-guide

Surface cuts and wear indicate:

- Sharp or heavy parts impacting belt
- Jammed parts
- Improperly installed bottom wipers (if installed)
- Accumulated dirt in wipers (if installed)
- Foreign material inside the conveyor
- Improperly positioned accessories
- Bolt-on guiding is pinching belt

Stalling or slipping indicates:

- Excessive load on belt
- Conveyor belt or drive timing belt are not properly tensioned
- Worn knurl or impacted dirt on drive pulley
- Intermittent jamming or drive train problems

Damage to V-guide indicates:

- Twisted or damaged conveyor frame
- Dirt impacted on pulleys
- Excessive or improper side loading

NOTE

Visit www.dorner.com for complete list of troubleshooting solutions.

Cleaning

IMPORTANT

Do not use belt cleaners that contain alcohol, acetone, Methyl Ethyl Ketone (MEK) or other harsh chemicals.

Use Dorner Belt Cleaner (part # 625619). Mild soap and water may also be used. Do not soak the belt.

For /05 woven polyester and /06 black anti-static belts, use a bristled brush to improve cleaning.

Belt Installation for Conveyor with Stands and Gearmotor Mounting Package

⚠ WARNING

Removing mounting brackets without support under gearmotor will cause conveyor to tip, causing severe injury.

PROVIDE SUPPORT UNDERNEATH THE GEARMOTOR WHEN CHANGING THE BELT

1. Ensure temporary support stands (Figure 21, item AS) are placed at both ends of the conveyor. Place an additional support stand under the drive motor (AT), if equipped. See WARNING.
2. Orient belt so splice leading fingers (Figure 27, item AV) point in the direction of belt travel as identified by the conveyor directional label (AW).
3. Install belt (Figure 30, item AR) on conveyor. Lift conveyor slightly to avoid pinching belt on temporary support stands.

Figure 30

4. Re-install conveyor mounting brackets. Refer “Mounting Brackets” on page 8, steps 3 through 5.
5. Install spring loaded return pulley (Figure 31, item AQ) into knuckle plate (AX).

Conveyor Belt Tensioning

⚠ WARNING

Exposed moving parts can cause severe injury.
LOCK OUT POWER before removing guards or performing maintenance.

1. On tension end of the conveyor, identified by the pinion locking screw (Figure 33, item T), loosen the two tail clamp bolts (U), on both sides of conveyor.

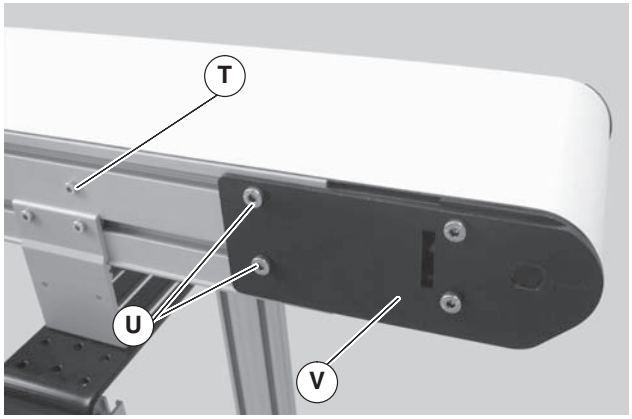

Figure 33

2. With 5mm hex wrench, hold pinion torque screw (Figure 34, item W). Loosen the pinion locking screw (Figure 33, item T) and turn the pinion torque screw (W) to extend head plate assembly.

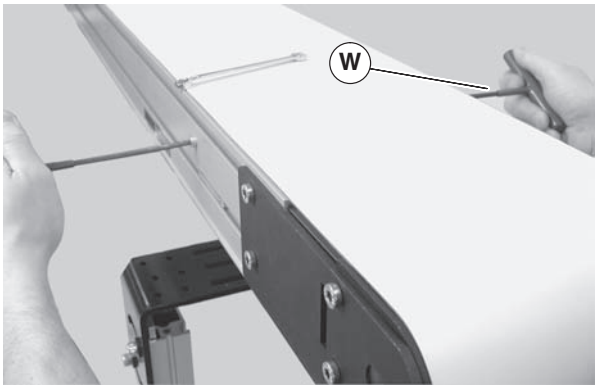

Figure 34

NOTE

On pinion gear, do not exceed a torque of 100 in-lb (11.3 N–m). Over tensioning the conveyor belt could cause excessive pulley bearing load and early failure.

3. Extend head plate assembly until proper tension in the belt is achieved. If proper tensioning can not be obtained before the belt life indicator is all black (Figure 35, item BA) the belt must be replaced.

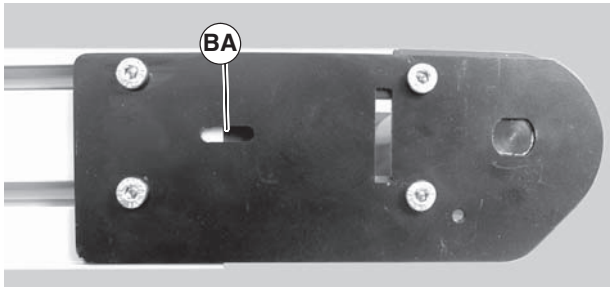

Figure 35

4. After adjusting proper tensioning, tighten the pinion locking screw (Figure 33, item T) to 69 in–lbs (7.8 N–m), and tighten tail clamp bolts (Figure 33, item U) on both sides of conveyor to 146 in-lb (16.5 N–m).
5. If belt tracking is necessary, refer to “Conveyor Belt Tensioning” on page 14.

Conveyor Belt Tracking

V-Guided Belts

V-guides on belts help maintain proper belt tracking. Track as needed to reduce belt bulge from center of belt (Figure 36). See steps below in “Non V-guided Belts” procedure for adjusting for any belt bulging. Belt bulge will be minimal when belt is properly tracked.

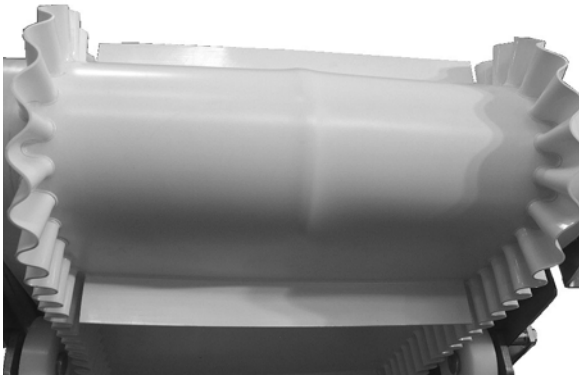

Figure 36

Non V-Guided Belts

Non V-guided belt conveyors are equipped with belt tracking assemblies.

When adjusting belt tracking, always adjust the discharge end of the conveyor first. To adjust belt tracking:

1. Ensure tensioning racks are extended and touching the idler pulley headplates: loosen the pinion locking screw (Figure 33, item T) and rotate the pinion torque screw (Figure 34, item W) clockwise until contact with the head plate is made, then tighten the pinion locking screw (T) to 69 in–lbs (7.8 N–m)
2. On the side of conveyor to be adjusted, loosen two (2) tail clamp screws (Figure 37, item U).

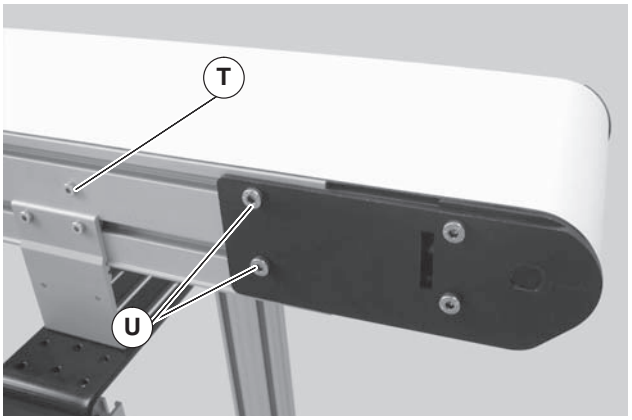

Figure 37

3. With the conveyor running, use wrench (Figure 38, item BB) to rotate the tracking screw (Figure 39, item BC) in small increments until the belt tracks in the center of the conveyor.

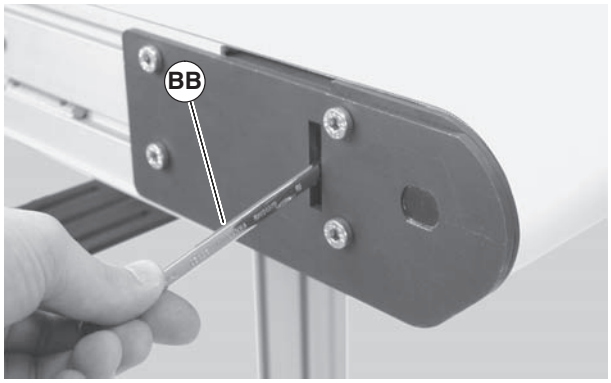

Figure 38

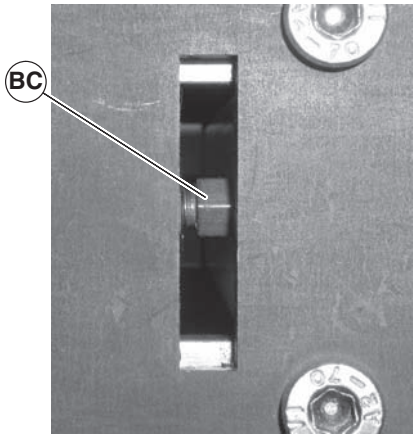

Figure 39

4. Re-tighten the head plate fastening screws (Figure 40, item U) with a 5 mm hex-key wrench to 100 in-lb (12 Nm).

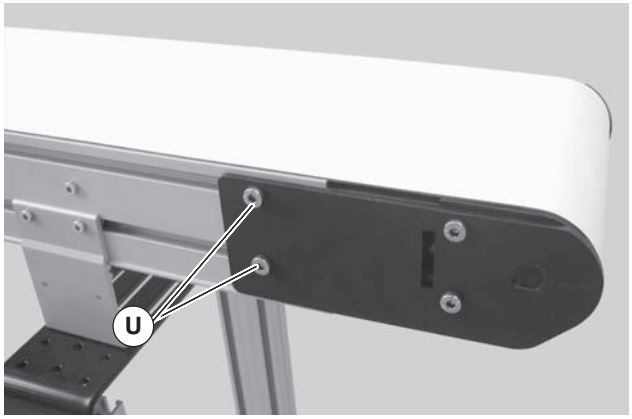

Figure 40

Conveyor Angle Adjustment

⚠ WARNING

Removing mounting brackets or adjustment screws without support under gearmotor and conveyor will cause conveyor to tip or drop, causing severe injury.

PROVIDE SUPPORT UNDERNEATH THE GEARMOTOR WHEN ADJUSTING THE CONVEYOR ANGLE

⚠ WARNING

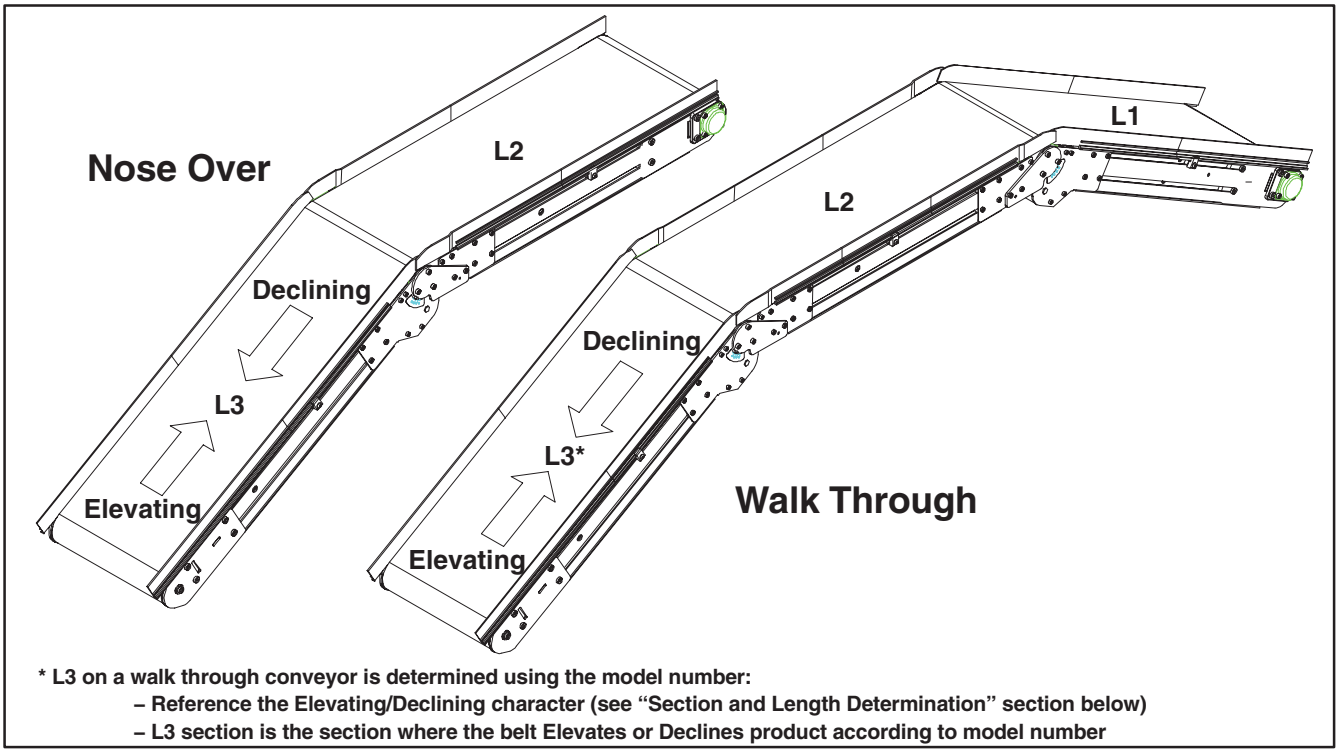
Conveyor Configurations



*** L3 on a walk through conveyor is determined using the model number:**
– Reference the Elevating/Declining character (see "Section and Length Determination" section below)
– L3 section is the section where the belt Elevates or Declines product according to model number

Guiding Options (TT)
