Warnings – General Safety

WARNING

The safety alert symbol, black triangle with white exclamation, is used to alert you to potential personal injury hazards.

DANGER

SEVERE HAZARD!

KEEP OFF CONVEYORS. Climbing, sitting, walking or riding on conveyor will result in death or serious injury.

WARNING

SEVERE HAZARD!

LOCK OUT POWER before removing guards or performing maintenance. Exposed moving parts can cause serious injury.

WARNING

BURN HAZARD!

DO NOT TOUCH the motor while operating, or shortly after being turned off. Motors may be HOT and can cause serious burn injuries.

WARNING

PUNCTURE HAZARD!

Handle drive shaft keyway with care. It may be sharp and could puncture the skin, causing serious injury.

DANGER

EXPLOSION HAZARD!

- **DO NOT OPERATE CONVEYORS IN AN EXPLOSIVE ENVIRONMENT.** The electric gearmotor generates heat and could ignite combustible vapors.
- Failure to comply will result in death or serious injury.

WARNING

CRUSH HAZARD!

- **DO NOT** place hands or fingers inside the conveyor while it is running.
- **DO NOT** wear loose garments while operating the conveyor. Loose garments can become caught up in the conveyor.
- Failure to comply could result in serious injury.

WARNING

CRUSH HAZARD!

- **SUPPORT CONVEYOR SECTIONS PRIOR TO LOOSENING STAND HEIGHT OR ANGLE ADJUSTMENT SCREWS.**
- Loosening stand height or angle adjustment screws may cause conveyor sections to drop down, causing serious injury.

WARNING

SEVERE HAZARD!

- Dorner cannot control the physical installation and application of conveyors. Taking protective measures is the responsibility of the user.
- When conveyors are used in conjunction with other equipment or as part of a multiple conveyor system, **CHECK FOR POTENTIAL PINCH POINTS** and other mechanical hazards before system start-up.
- Failure to comply could result in serious injury.

iDrive Wiring

⚠ WARNING

<p>Motor will start immediately once power is supplied. Exposed moving parts can cause severe injury. LOCK OUT POWER before wiring to avoid accidental startup.</p>

The 2200 series iDrive is available in 2 models:

- A. Cover Mounted Controls
- B. Cover Mounted Controls with Remote Start/Stop Cable

Cover Mounted Controls with 115 volt Power Supply

1. No wiring is required. Attach quick disconnect end (**Figure 22, item 1**) of power supply (**Figure 22, item 2**) to power jack (**Figure 22, item 3**).

Figure 22

2. Select conveyor running direction with directional switch (**Figure 22, item 4**).
3. Select conveyor speed with speed control knob (**Figure 22, item 5**).

NOTE

1. *Start Stop Application: Maximum start stop cycles are 30 per minute.*
2. *Reversing Applications: Do not reverse the motor direction when running. Make sure the motor is stopped before reversing signal is given.*

Cover Mounted Controls with Remote Start/Stop Cable

1. Connect power supply to cover. See previous section.
2. Select conveyor running direction with directional switch (**Figure 23, item 1**).

Figure 23

3. Select conveyor speed with speed control knob (**Figure 23, item 2**).
4. Remote start/stop cable (**Figure 23, item 3**) comes with wire nut over remote leads to allow test running conveyor.
5. Remove wire nut and connect red and black wires to switching device. Switching device minimum rating 1 amp @ 24 VDC.

NOTE

1. *Start Stop Application: Maximum start stop cycles are 30 per minute.*
2. *Reversing Applications: Do not reverse the motor direction when running. Make sure the motor is stopped before reversing signal is given.*

Installation

Cover Mounted Controls with Customer Provided Power Supply

1. Locate the male disconnect plug (**Figure 24, item 1**) provided.

Figure 24

2. Wire and solder DC power to the two terminals of the provided DC power plug. Wire +VDC to the short lug (**Figure 25, item 1**) and -VDC to the long lug (**Figure 25, item 2**).

Figure 25

3. Required power is 24VDC, 2 amps minimum.

Cover Mounted Controls with Photo Eye Option

Figure 26

1. Mount photo eye and reflector bracket to side of conveyor close to zone to be sensed.
2. Connect power supply to AC input power, photo eye plug, and to conveyor drive cover. Adjust conveyor running direction switch to off (center) position. Photo eye should have yellow LED lit.
3. Adjust reflector to align with red beam emitted from photo eye and be at a 90 degree +/- 15 degree angle to photo eye face. When reflector is properly aligned, photo eye will have yellow and red LED lit. Green LED indicates output relay is energized.
4. Adjust photo eye sensitivity by placing a sample object in the beam. Unscrew clear cover on photo eye top and slowly turn the gain adjustment clockwise (see caution below concerning pot adjustment) until the green (output) LED activates (assuming the sensor is in the light operate mode). Note the position and remove the sample object. Now continue turning the sensitivity setting clockwise to find the position where the green LED activates from the background reflection. Reset the sensitivity midway between the two positions.
5. Photo eye comes preset to Light-On operation which causes the conveyor to run when the sensed zone is clear and stop when the sensed zone is blocked. For Dark-On operation move selector to D.O. position (**Figure 26**).
6. Select conveyor running direction with directional switch (**Figure 23, item 1**). If Dark-On operation is selected, temporarily block photo eye to energize conveyor.
7. Select conveyor speed with speed control knob (**Figure 23, item 2**).

CAUTION

Adjustment pots are 3/4 turn devices. Any resistance encountered while adjusting these pots indicates you have reached the adjustment limit stop. Turning past stop will damage the sensor.

Installation

Guide Clips

1. Install guide clip assembly (**Figure 27, item 1**) into conveyor t-slot (**Figure 27, item 2**) as shown.

Figure 27

2. Tighten screw (**Figure 28, item 1**) making sure t-bar (**Figure 28, item 2**) rotates and engages inside of t-slot.

Figure 28

Adjustable Guides

1. Install guide bracket assembly (**Figure 29, item 1**) into the conveyor t-slot (**Figure 29, item 2**).

Figure 29

2. Tighten screws (**Figure 30, item 1**) making sure t-nut (**Figure 30, item 2**) rotates and engages inside of the t-slot.

Figure 30

3. Loosen screw (**Figure 31, item 1**) on end of shaft (**Figure 31, item 2**) to remove clip (**Figure 32, item 1**).

Figure 31

Figure 32

Installation

4. Snap clip (**Figure 33, item 1**) onto guide rail (**Figure 33, item 2**).

Figure 33

Figure 84

NOTE

On pinion gear, do not exceed a torque of 75 in-lb (8.4 Nm). Over tensioning the conveyor belt could cause excessive pulley bearing load and early failure.

3. After adjusting proper tensioning, tighten fastening screws (**Figure 83, item 5**) on both sides of conveyor to 60 in-lb (7 Nm).
4. If equipped, install dust covers (**Figure 83, item 3**).

Preventive Maintenance and Adjustment

Center Drive Conveyors

The conveyor is equipped with an automatic tensioning cylinder. No tensioning adjustment is required.

For a new belt, the tension plate (**Figure 85, item 1**) will be in position indicated below left. When the tension plate extends to position indicated below right, the conveyor belt must be replaced.

Figure 85

2. Adjust head plate assembly so end of conveyor frame aligns with or between the head plate tensioning marks (**Figure 87, item 1 & 2**). Replace belt if proper tensioning can not be obtained while aligning the end of the conveyor frame with or between the tensioning marks. See NOTE.

3. After adjusting proper tensioning, tighten fastening screws (**Figure 86, item 3**) on both sides of conveyor to 60 in-lb (7 Nm).
4. If equipped, install dust covers (**Figure 86, item 4**).

Adjust cams (**Figure 88, item 4**) until indicator slots (**Figure 88, item 5**) are horizontal and facing end of conveyor. Then slide cam assemblies against head plates (**Figure 88, item 6**) and re-tighten cam fastening screws (**Figure 88, item 3**) to 60 in-lb (7 Nm).
3. On the side toward which the belt is tracking, loosen head plate fastening screws (**Figure 88, item 2**).
4. With the conveyor running, use a 5 mm hex-key wrench to rotate the tracking cam (**Figure 88, item 4**) in small increments until the belt tracks in the center of the conveyor. Then while holding the cam in position, re-tighten the head plate fastening screws (**Figure 88, item 2**) with a 4 mm hex-key wrench to 60 in-lb (7 Nm).
